Suclow Residue Pump

The SUCLOW is a rugged, cast aluminium cased, electric submersible pump, power by a single phase, 0.4 Kw, 240Vac, 50Hz induction motor drawing 3.9 Amps. For safety, the pump features both in-built capacitor start and thermal cut-out with automatic resetting, to protect the motor windings from overheating, either from current surge or mechanical blockage. As a puddle sucker pump, it is also “jacketed” allowing the water to pass around the motor for added cooling. The pump and motor share a common stainless steel shaft with a double silicon carbide mechanical seal and intervening oil chamber for seal life in excess of 6,000 hours use. The SUCLOW is a solid 11kg unit reliable in its performance. With a minimum suction level of 2mm the SUCLOW submersible pump is an ideal “puddle sucker”.

Available as 1" or 2"
